

PUNJAB

FROM COMMITMENT
TO RESULTS

— 2024 - 2026 —

BUILDING A STRONGER, HEALTHIER
AND PROSPEROUS PUNJAB

From commitment to results, the distance in Punjab has never been shorter. Two years that have fundamentally changed the measure of what is possible. The Chief Minister's vision rooted in a clear commitment to development, has steadily translated into visible and measurable progress, supported by a development budget of PKR 2,550 billion over the past two years. This reflects a 61% increase in FY 2024–25 from the base year of 2022–23, rising further to 107% in FY 2025–26.

At the heart of this transformation, is a deliberate focus on building from the ground up. 25% of the Annual Development Program's portfolio is concentrated in projects above PKR 500 million, reflecting a strong emphasis on large-scale, high-impact investments designed to deliver long-term results across Punjab. This signals a more selective and targeted allocation strategy.

Infrastructure continues to anchor this progress, with allocations in FY 2025–26 increasing by 63.6% compared to the base year. This reflects a shift from expansion toward consolidation, ensuring that infrastructure investments are focused on priority areas with the highest economic and social returns.

Building on this foundation, investment in human capital has emerged as a central priority, reflected in a 83.8% increase in social sector allocations from the base year. This reinforces the government's continued commitment to service delivery, human development, and social well-being across Punjab.

In parallel, the GoPb has significantly scaled up support for production-oriented sectors to accelerate economic activity and job creation, raising production allocations to PKR 149 billion (up 326% from the base year), with decisive expansion of the sector to governance, public administration, and service delivery. This sharp increase reflects a clear policy shift toward institutional strengthening and service-oriented reforms.

Together, this layered and evolving approach from infrastructure to people, and from production to institutions defines a new development paradigm for the province, where progress is not only planned, but seen as inclusive and sustainable progress across Punjab.

EDUCATING THE FUTURE

Preparing today's children for a changing future through a stronger public education system. Punjab is transforming public education at every level, from a child's first classroom to higher learning. The province is expanding early-years schooling, building and rebuilding schools, and embedding STEM across the system. At the same time, it is extending special and non-formal education that reaches every learner.

SMOG LESS PUNJAB

Punjab is redefining environmental governance by moving beyond reactive regulation towards proactive and data driven climate action. Supported by over PKR 25 billion in environmental initiatives, the province has expanded air quality monitoring, strengthened emissions enforcement, operationalized anti-smog guns and invested in climate intelligence and early warning capabilities. Together, these measures are helping reduce environmental risks, improve regulatory effectiveness and build the foundations of a cleaner, more resilient and sustainable Punjab.

PKR 273 BN

GUIDING PUNJAB'S URBAN FUTURE

Pakistan is among the fastest urbanizing countries in South Asia. The major demographic shift as a result, is centered in Punjab, where nearly 40% of the population now lives in cities. To manage rapid urban growth and prevent unplanned sprawl, the Punjab government is focusing on three key areas: housing, shifting toward compact, planned development to address urban shelter needs; water supply, transitioning from declining groundwater resources to surface water systems to reduce supply gaps; urban services, and investing in urban regeneration.

EMPOWERING THE FARMERS

Punjab accounts for 57% of Pakistan's cultivated land, producing 80% of the nation's wheat, 83% of its cotton, and 97% of its rice. 97% of farmers own less than 12.5 acres and 61% cultivate less than 2.5 acres of land. For generations, the farmers who feed a nation of 240 million have seen the smallest share of its rewards. Addressing that imbalance sits at the heart of this government's agricultural agenda.

An efficient road network is essential for economic growth, trade and service delivery. Through the rehabilitation of over 30,000 kilometres of roads and investments in major transport corridors, Punjab is improving connectivity between rural and urban areas, facilitating the movement of people and goods, and expanding access to education, healthcare and markets. These investments are creating a more integrated and competitive provincial economy.

30,000+ KM
roads rehabilitated

ROADS THAT POWER PROGRESS

A reliable road network is fundamental to mobility, safety and economic development. By upgrading key transport corridors, Punjab is improving connectivity between communities, markets and services. These investments are reducing travel risks and ensuring smoother movement of people and goods across the province.

500,000+ vehicles per day

having safer mobility

Roads Rehabilitation Program

PKR 344 BN

To the left is a vast field of green crops, and to the right are several large, mature trees. In the far distance, a small village with white-walled houses is visible under a clear sky.

RESTORING EXISTING ROAD NETWORKS

Roads are critical to economic integration, mobility and service delivery. Under the Sarkain Bahal Punjab Khushhal initiative, Punjab has rehabilitated more than 3,400 kilometres of roads through investments exceeding PKR 78.23 billion. These upgrades are reducing travel times, lowering transport costs and improving access to markets, education and healthcare across the province.

3.134 MN vehicles per day

PUNJAB'S PUBLIC TRANSPORT TRANSFORMATION

Access to employment, education, and healthcare in Punjab fundamentally depends on localized mobility. Lack of convenient public transport linkages limits economic participation and disproportionately affects women, students and low-income households. Through investments in masstransit, electric buses and student transport services, Punjab is expanding availability while transitioning urban fleets to cleaner electric mobility.
